

SeeMobile

Mobile License Plate Inventory and Enforcement Platform

LOST VEHICLE? LOST TICKET? WE'VE GOT YOU COVERED

SeeMobile is the innovative MLPI (Mobile License Plate Inventory) system from HTS, the industry leader in license plate recognition. With its ability to manage parking facilities of any size, **SeeMobile** offers a complete solution – from collection to recognition to reporting.

As the patrol vehicle traverses a pre-defined route through the facility, imaging units capture and store license plates, matching against hot lists of vehicles of interest, and then syncing the information to the central SeeControl server – which is easily accessed for reporting purposes.

SeeMobile is a comprehensive inventory system that provides all the data you need to efficiently manage your parking assets:

- Locate lost vehicles
- Identify vehicle overstays
- Monitor vehicle movement between spaces
- Provide updated inventory counts by location – garage, lot, floor, and row
- Sync collected data with the central repository for effortless hotlist and inventory management

HOW IT WORKS?

Either wireless or hardwire links can be used to connect the SeeMobile in-vehicle application with the central SeeControl database. Upon establishing connectivity, the in-vehicle application downloads routes and hotlists, and begins its patrol. At the end of its shift, the patrol vehicle connects again, uploading captured license plate and location information.

SeeMobile supports up to 4 dual-head imaging units per vehicle.

SEEMOBILE FEATURES AND BENEFITS

- Accurate license plate recognition under all types of lighting conditions
- Complete inventory capabilities for facilities of any size
- Locate lost vehicles
- GPS and RFID route mapping
- Identify parking fraud and overstayed vehicles

USER INTERFACE FOR ENHANCED PRODUCTIVITY

- Touch-screen ease and convenience
- Operator can view and edit captured data
- Change routes on the fly
- Configurable visual and audible real-time notifications
- Left/right direction indicator alerts operator which side the “hit” is on

WHO'S PARKING IN YOUR LOT? GET THE DATA YOU NEED – QUICKLY AND EFFICIENTLY – WITH SEEMOBILE
